

Quantum Computational Intelligence and AI

Date: Wednesday, March 19, 2025, 9:00-10:00

Introduction:

The Panel Session on Quantum Computational Intelligence (CI) and AI at IEEE SSCI 2025 will focus on the emerging intersection of quantum computing and artificial intelligence, with an emphasis on computational intelligence (CI) techniques and their applications. This panel will bring together leading researchers, educators, and industry experts to discuss the future of Quantum CI and AI, bridging theory, applications, and real-world impact. Discussion Topic: 1) Quantum Evolutionary and Fuzzy Systems for AI; 2) Quantum-inspired optimization and AI for Decision-Making; 3) Quantum Machine Learning (QML) and Its Real-World Applications; 4) Hybrid Quantum Genetic Algorithm (HQGA) and Computational Intelligence for Quantum AI and Knowledge Representation; 5) Human-Machine Collaborative Learning and Quantum CI in Education.

Panel Chair:

- Chang-Shing Lee, National University of Tainan, Taiwan

Panelists:

- Giovanni Acampora, University of Naples Federico II, Italy
- Kazi Shah Nawaz Ripon, Oslo Metropolitan University, Norway
- Samuel Yen-Chi Chen, Wells Fargo, USA
- Autilia Vitiello, University of Naples Federico II, Italy
